

Ahmed Mohamed Zakaria

Full Stack (.NET & Angular)

Cairo, Egypt | [+20 1281889292](tel:+201281889292)

ahmedmohamedzakaria423@gmail.com [GitHub](#) [LinkedIn](#) [Portfolio](#)

Summary

Full Stack Developer with 1 year of professional experience building enterprise healthcare web applications. Specialized in ASP.NET Core, Dapper, EF Core, and SQL performance tuning, paired with modern frontend architecture in Angular, Nx Monorepo, NgRx, Angular Signals, and RxJS. Motivated to deliver useful, real-world software that makes a difference.

Education

Bachelor's Degree in Computer Science

Sep 2021 – June 2025

MTI University — Faculty of Computer Science & Artificial Intelligence | Grade: Very Good

Experience

.NET & Angular Developer | Rosenfield Health

September 2025 – Present

Cairo, Egypt / Hybrid

- Developed and optimized scalable web software solutions for radiology and medical imaging workflows (iCode Suite), serving multi-tier roles including Patients, Doctors, Radiologists, Clerks, Referral Partners, and Site Administrators.
- Engineered high-performance data-access layers using EF Core for domain logic and Dapper for high-throughput read queries and reporting. Optimized complex SQL queries, index structures, and execution plans to handle high-volume patient data while reducing API latency.
- Architected modular Angular applications within an Nx Monorepo Workspace using NgRx state management, Angular Signals, and RxJS Observables for real-time clinical dashboards, diagnostic reporting, and referral tracking.

Projects

Full-Stack Real-Time Auction System

[GitHub Repo ↗](#)

- Developed a full-stack real-time auction platform featuring instant bidding updates via SignalR and synchronized countdown timers.
- Implemented secure Stripe payment processing, Redis caching, Specification Pattern queries, and JWT + 2FA authentication.

Technologies Used: Angular, ASP.NET Core, SignalR, EF Core, Redis, Stripe, RxJS, Bootstrap, JWT & Refresh Tokens, 2FA (OTP), Repository & Unit of Work, Specification Pattern, Clean Architecture.

Full-Stack E-Commerce System

[GitHub Repo ↗](#)

- Built a complete online store following Clean Architecture with wishlist/cart management, multi-step Stripe checkout, and advanced product search and filtering.
- Integrated SQL Server and Redis caching to optimize database queries and deliver seamless user experience.

Technologies Used: Angular, ASP.NET Core, SQL Server, Redis, Entity Framework Core, Stripe, JWT, Repository & Unit of Work, Specification Pattern, Clean Architecture.

Gunners Store – Themed Fan Merchandise

[GitHub Repo ↗](#)

- Created an Arsenal FC-themed e-commerce web application featuring role-based access control (RBAC), Stripe online payments, and live order tracking.

Technologies Used: ASP.NET Core MVC, SQL Server, Bootstrap, Stripe, ASP.NET Identity, Unit of Work, N-Tier Architecture.

Technical Skills

Backend : C#, ASP.NET Core, Dapper, Entity Framework Core, SignalR, LINQ, RESTful APIs, MVC

Frontend : Angular, Angular Signals, Nx Monorepo, NgRx, RxJS & Observables, HTML, CSS, Bootstrap, TypeScript, ngx-bootstrap, Font Awesome, Toastr, ngx-spinner

Database & Caching : SQL Server, Redis, SQL Query Optimization, Indexing & Execution Plans

Payment Processing : Stripe

Authentication : ASP.NET Core Identity, JWT, 2FA (OTP), Role-Based Access Control (RBAC)

Architectural & Design Patterns : Clean Architecture, CQRS Pattern, Factory Pattern, Strategy Pattern, Repository Pattern, Unit of Work Pattern, Specification Pattern

Languages

Arabic — Native

English — Intermediate
